## CAREER OBJECTIVE

Passionate IT developer with hands-on experience building modern web and mobile applications using ReactJS and Node.js, and developing growing expertise in Flutter. Seeking a Junior Software Engineer role where I can contribute to innovative development teams, applying my full-stack and mobile development skills to build scalable and high-performing applications.

## SKILLS

ReactJS, HTML, CSS3, SASS, Tailwind CSS

NextJS, NodeJS, ExpressJS, FastifyJS, Flutter, MongoDB

## PROJECTS

- INCEPTION
  - Built a secure and scalable container infrastructure using Docker and Docker Compose.
  - Configured and deployed MariaDB, WordPress and Nginx containers from scratch using custom Dockerfiles.
  - Added an admin container for database management and a Python http.server container for serving static files.
  - Specializes in Linux system administration, container orchestration, and service isolation.
- TRANSCENDENCE (ONGOING)
  - Leading development of user & friendship models and friendship logic.
  - Implementing secure JWT authentication and Google OAuth integration.
  - Designing front-end pages for user settings, match history, and social features.
  - Handling match history display, ranking system, and bilingual language support.
  - Managing DevOps setup with Docker, and monitoring using Kibana & Grafana.
- FOOD UI - FLUTTER
  - Developed responsive UI for a food recommendation app with categories, diets, and popular items.
  - Built custom widgets for search, app bar, category cards, diet recommendations, and popular diets section.
  - Implemented horizontal and vertical scrollable lists and dynamic layouts for different sections.
